Comment: The West Lake Landfill is a public health disaster receiving national attention. Radioactive materials at risk of catching on fire have contaminated the air, soil and water for decades, leading to higher rates of cancer, birth defects and other health issues to residents. While cost is an option and capping the area is a consideration, this will not remove risk. The longer this dump exists, the more money it will cost in its negative impacts on residents lives and increased cost and burden to Republic Services who may have to deal with lawsuits for all the lives they have ruined. Republic Services does have enough money though. The area has not been sufficiently tested. Please do your job and protect the environment. People live here.
